COST, RETAIL & NEIRE

- **Cost Price**

Harga Beli dari Supplier

- **Mark Up / Neire**

Keuntungan/Profit

- **Retail Price**

Harga Jual

Mark Up / Neire

- This is the difference between the cost of a good or service and its selling price.
- This are added onto the total **COST** incurred by the producer of a good or service in order to create a profit.
- It also meaning as minimum amount of profit, which **AEON** receives in rewards for fulfilling its role as retailer.

Retail Price

- The price of a good or product when it is sold to the end user for consumption, not for resale through a third-party distribution channel.
- This is determined by the market situation

FORMULA

$$\text{Retail Price} - \text{Cost Price} = \text{Mark Up}$$

$$\text{Retail Price} - \text{Mark Up} = \text{Cost Price}$$

$$\text{Retail Price} = \text{Cost Price} + \text{Mark Up}$$

$$\text{Mark Up \%} + \text{Cost \%} = 100 \% \text{ (Retail Price \%)}$$

By Rupiah (RP)

AEON FIGURE 1

EFEK PRICE ALTERATION TERHADAP GROSS PROFIT

- Saat produk dengan 25% mark up terjual setelah didiskon 5%, gross profit bisa dengan mudah dihitung: $25\% - 5\% = 20\%$.
- Hal ini karena Sales juga berubah bersama Selling Price sesungguhnya.
- Setelah produk dijual dengan Price Alteration, Gross Profit dapat dihitung dengan formula di slide berikut>>

EFEK PRICE ALTERATION TERHADAP GROSS PROFIT

FORMULA

$$\text{GROSS PROFIT \%} = \frac{(\text{Mark Up \%} - \text{Price Alteration \%})}{(\text{Retail Price} - \text{Price Alteration \%})} \times 100$$

$$= \frac{(25\% - 5\%)}{(100\% - 5\%)} \times 100$$

$$= \underline{\underline{21.05\%}}$$

OR

$$= \frac{\text{Rp } 20,-}{\text{Rp } 95,-} \times 100$$

$$= \underline{\underline{21.05\%}}$$

EFEK PRICE ALTERATION TERHADAP GROSS PROFIT

FORMULA

$$\begin{aligned}\text{PRICE ALTERATION \%} &= \frac{\text{Price Alteration}}{\text{Sales}} \times 100 \\ &= \frac{\text{Rp } 5,-}{\text{Rp } 95,-} \times 100 \\ &= \underline{\underline{5.26\%}}\end{aligned}$$

AEON FIGURE 2

PRICE ALTERATION & LOSS EFFECT TO PURCHASE, SALES & INVENTORY

Opening Inventory

- Is the recorded cost of **inventory** in a company's accounting record at the start of an accounting period.
- Its counted at end of month (every 30th) and start before 1st every month

PRICE ALTERATION & LOSS EFFECT TO PURCHASE, SALES & INVENTORY

Purchase

- The action of buying something to be added to inventory (Company) each month.
- Also known as inventory amount added during start period 1st until 30th every month.

PRICE ALTERATION & LOSS EFFECT TO PURCHASE, SALES & INVENTORY

Closing Inventory

- The value of goods available for sale at the end of the accounting period.
- Its counted at end of month (every 30th) each month.

PRICE ALTERATION & LOSS EFFECT TO PURCHASE, SALES & INVENTORY

FORMULA

Sales =

Opening Inventory + Purchase – Closing Inventory – Price Alteration

Sales Cost =

[Sales / (Sales + Closing)] X (Opening Cost + Purchase Cost)

Gross Profit =

Sales (Retail) – Sales (Cost)

PRICE ALTERATION & LOSS EFFECT TO PURCHASE, SALES & INVENTORY

FORMULA

Gross Profit % =

Gross Profit Amount / Sales (Retail) X 100

Closing Retail Amount =

Opening Stock + Purchase – Sales – PA – Loss

Price Alteration =

Sales (Retail) X Price Alteration %

PRICE ALTERATION & LOSS EFFECT TO PURCHASE, SALES & INVENTORY

EXAMPLE

AEON
Figure 1

	Opening	Purchase	Sales	PA	Loss	Closing
Cost	80%	70%	?			?
Retail	RM100k	RM 50k	RM 80k	3%	1%	?
Neire						

Opening Cost Amount

= Opening (Retail) X Opening (Cost) ratio

= RM 100,000 X 80 %

= RM 80,000

PRICE ALTERATION & LOSS EFFECT TO PURCHASE, SALES & INVENTORY

EXAMPLE

Purchase Cost Amount

$$\begin{aligned} &= \text{Purchase (Retail)} \times \text{Purchase (Cost) ratio} \\ &= \text{RM } 50,000 \times 70 \% \\ &= \text{RM } 35,000 \end{aligned}$$

Price Alteration

$$\begin{aligned} &= \text{Sales (Retail)} \times \text{Price Alteration ratio} \\ &= \text{RM } 80,000 \times 3 \% \\ &= \text{RM } 2,400 \end{aligned}$$

Loss

$$\begin{aligned} &= \text{Sales (Retail)} \times \text{Loss ratio} \\ &= \text{RM } 80,000 \times 1 \% \\ &= \text{RM } 800 \end{aligned}$$

PRICE ALTERATION & LOSS EFFECT TO PURCHASE, SALES & INVENTORY

EXAMPLE

$$\begin{aligned}\text{Closing Retail Amount} &= \text{Opening} + \text{Purchase} - \text{Sales} - \text{PA} - \text{Loss} \\ &= \text{RM}100\text{k} + \text{RM}50\text{k} - \text{RM}80\text{k} - \text{RM}2400 - \text{RM } 800 \\ &= \text{RM } 66, 800\end{aligned}$$

$$\begin{aligned}\text{Sales Cost} &= [\text{Sales} / (\text{Sales} + \text{Closing})] \times (\text{Opening Cost} + \text{Purchase Cost}) \\ &= [\text{RM } 80,000 / (\text{RM } 80,000 + \text{RM } 66,800)] \times (\text{RM } 80,000 + \text{RM } 35,000) \\ &= \text{RM } 62, 670\end{aligned}$$

PRICE ALTERATION & LOSS EFFECT TO PURCHASE, SALES & INVENTORY

EXAMPLE

Gross Profit

$$= \text{Sales (Retail)} - \text{Sales (Cost)}$$

$$= \text{RM } 80,000 - \text{RM } 62,670$$

$$= \text{RM } 17,330$$

Gross Profit %

$$= \text{Gross Profit Amount} / \text{Sales (Retail)} \times 100$$

$$= \text{RM } 17,330 / \text{RM } 80,000 \times 100$$

$$= \text{RM } 21.66 \%$$

TURN OVER DAY & ROTATION

Turn Over Day

- Turn Over Day is The Number of Days to Clear All Existing Stock
- Average Stock / Daily Average Sales

Rotation

- Rotation is How Many Times Sales Can Clear Average Stock
- Monthly Sales / Average Stock

$$\text{Turn Over Day} \times \text{Rotation} = 30$$

THANK YOU
